DWR's Strategic Plan – To be released March 2017

■ Managing for Regional Sustainability

- Water resources (water supply, water quality, flood mgt)
- Related resources (land habitat, fish and wildlife)
- Contributes to well being of residents and environment

DWR Strategic Planning - Watershed System Approach

"The Plan boldly proposes a gradual evolution towards "river basin" hydrologically-based boundaries to become the new primary point of interface between State and local agencies for governance, financing and regulatory reform. These areas would not necessarily replace existing smaller-scale IRWM or other institutional boundaries, but would evolve from and encompass them and provide a more effective means of State-to-local interaction over time."

SAWPA's OWOW is the leader in this watershed approach
