RIVERSIDE COUNTY
WATERSHED PROTECTION

Background

MSAR TMDL 2019 Synoptic Study

Background

MSAR TMDL 2019 Synoptic Study

Special Investigation Purpose

RIVERSIDE COUNTY
WATERSHED PROTECTION

Purpose

To investigate the presence of human sources of bacteria in discharge from the Outfall (as identified in the Synoptic Study).

Study Questions

Within the Magnolia Center Storm Drain drainage area:

1. Where is dry weather flow present?
2. Where are the greatest concentrations of *E. coli* and greatest copies of the human DNA marker HF183?
3. Can we decrease the investigation area to focus on controllable human sources of fecal indicator bacteria?

Monitoring Locations and Analyses

| Site Description | Site ID | Approx. Sub-drainage area (acres) |
|------------------------------------|---------|-----------------------------------|
| A. Magnolia Center Storm Drain | 364a | NA ¹ |
| B. Jurupa Ave. near Grapevine Way | 364b | 127 |
| C. Correll St. near Jurupa Ave. | 364c | 132 |
| D. Correll St. near Arborwood Ln. | 364d | 219 |
| E. Brockton Ave. near Merrill Ave. | 364e | 1163 |
| F. Palm Ave. near Beatty Dr. | 364f | 636 |
| G. Arch Way near Orange Vista Way | 364g | 420 |
| H. Riverside Plaza ² | 364h | 42 |
| Mary St. Inlet 1 | MI1 | 375 |
| Mary St. Inlet 2 | MI2 | 546 |
| Mary St. Outlet | MO | 3,378 |

Field Parameters

- pH
- Temperature
- Dissolved oxygen
- Conductivity
- Turbidity (District)

Laboratory Analysis

- *E. coli*
- HF 183
- MBAS
- Turbidity (City)

Study Design

HF183 Analysis Decision Matrix

Weeks 1-3: HF183 collected and analyzed at all sites*

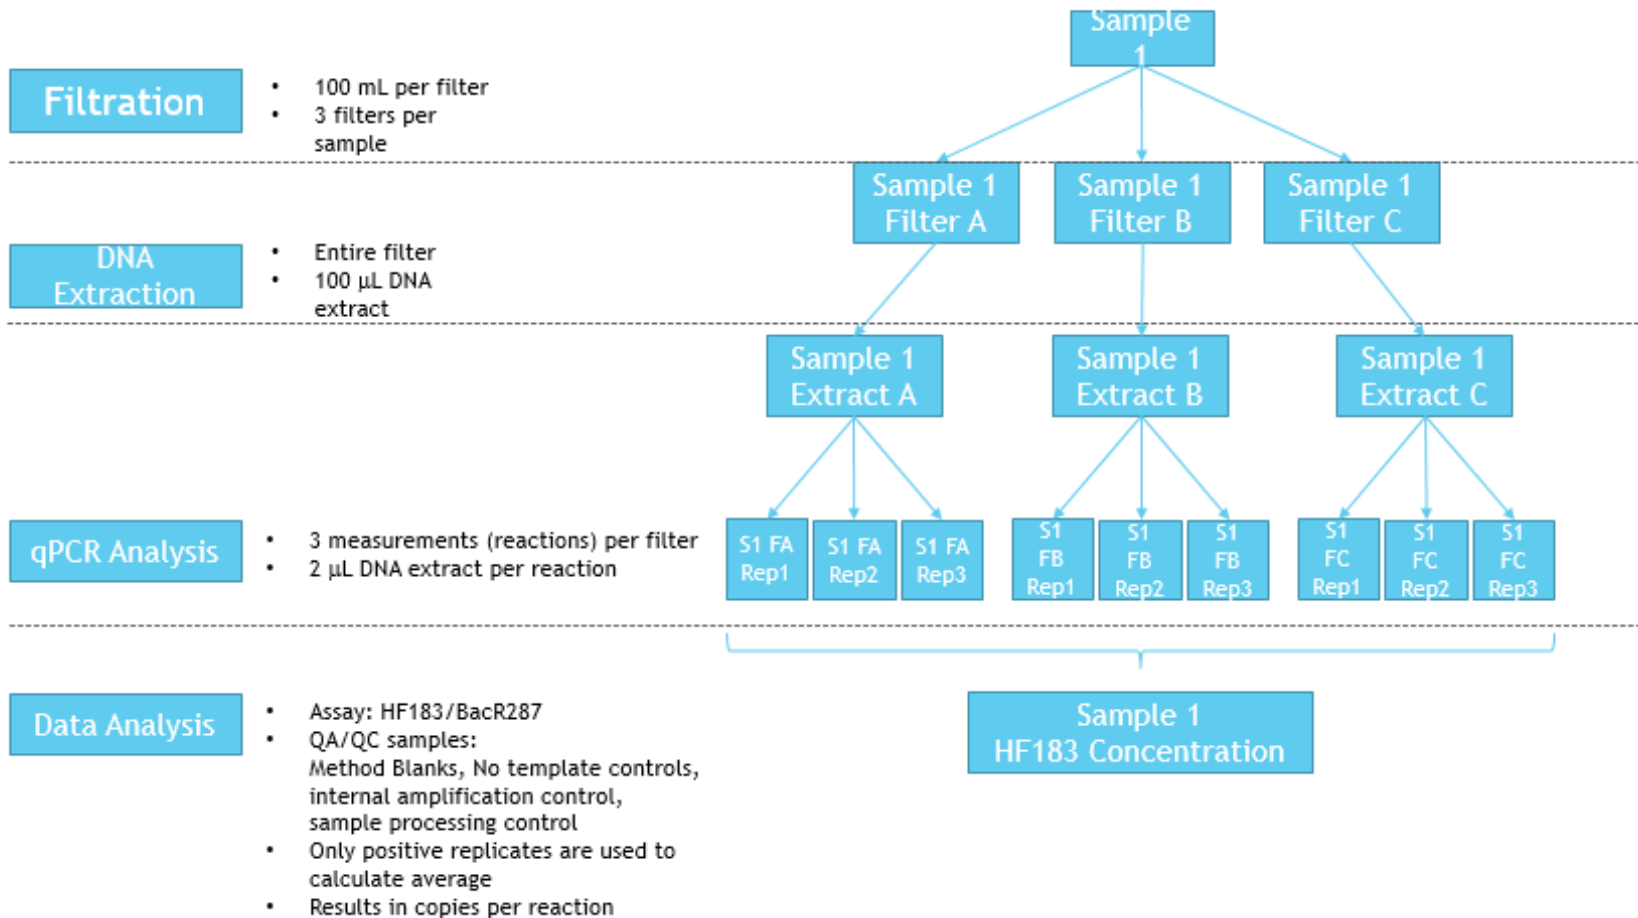

Weeks 4-5 dependent on matrix

*Additional sites may be added during the study dictated by field conditions. These may be subject to a further modified approach dependent upon the study schedule.

| | | HF183 Signal | | |
|-----------------------|------|---|--|---|
| | | High | Low | Dry (No Flow) |
| E. Coli Concentration | High | <p>Human source identified and sub-drainage area will be further investigated.</p> <p>Week 4 & Week 5 - Samples will be collected, filtered and frozen, but not analyzed at this time.</p> | <p>Human source not identified.</p> <p>Week 4 & Week 5 - Samples will be collected and analyzed to confirm results and continue to look for intermittent or transitory sources.</p> | <p>Non-stormwater flows not observed.</p> <p>Week 4 & Week 5 - Sites will continue to be monitored to look for intermittent or transitory sources. Samples will be collected and analyzed if water observed.</p> |

Monitoring Results

| Site | Average Flow (cfs) | <i>E. coli</i> Geometric mean (MPN/100 mL) | <i>E. coli</i> Load (MPN/ day) | Average HF183 Concentration (copies/ 100 mL) | HF183 Load (copies/ day) |
|------|--------------------|--|--------------------------------|--|--------------------------|
| 364A | 1.052 | 2,269 | $5.84 \cdot 10^{10}$ | 5,884 | $1.51 \cdot 10^{11}$ |
| 364B | 0.055 ¹ | 1,656 | $2.22 \cdot 10^9$ | 1,495 | $2 \cdot 10^9$ |
| 364C | 0.466 ¹ | 2,224 | $5.01 \cdot 10^{10}$ | 5,816 | $1.31 \cdot 10^{11}$ |
| 364D | 0.072 ¹ | 3,609 | $6.34 \cdot 10^9$ | 280 | $4.92 \cdot 10^8$ |
| 364E | 0.460 | 2,565 | $2.89 \cdot 10^{10}$ | 14,678 | $1.65 \cdot 10^{11}$ |
| 364F | 0.176 ¹ | 72 | $3.10 \cdot 10^8$ | 264 | $1.14 \cdot 10^9$ |
| 364G | 0.512 | 2,895 | $3.63 \cdot 10^{10}$ | 400 | $5.01 \cdot 10^9$ |
| 364H | 0.115 | 12,200 | $3.43 \cdot 10^{10}$ | 401 | $1.13 \cdot 10^9$ |
| MI1 | 0.094 | 443 | $1.02 \cdot 10^9$ | 324 | $7.46 \cdot 10^8$ |
| MI2 | 0.292 | 2,023 | $1.45 \cdot 10^{10}$ | 323 | $2.31 \cdot 10^9$ |
| MO | 0.280 | 43 ² | $2.95 \cdot 10^8$ | 299 | $2.05 \cdot 10^9$ |

- 1- flowrates adjusted due to incorrect recording of field measurements
- 2- geomean calculated using RL of 10 for ND results

Key Findings

RIVERSIDE COUNTY
WATERSHED PROTECTION

Key Findings

Study Question #1

Where is there dry weather flow?

All sites had measurable dry weather flow each week they were monitored.

RIVERSIDE COUNTY
WATERSHED PROTECTION

Key Findings

Study Question #2

*Where are the greatest concentrations of *E. coli* and copies of the human DNA marker HF183?*

| Site | Average Flow (cfs) | <i>E. coli</i> Geometric mean (MPN/100 mL) |
|------|--------------------|--|
| 364A | 1.052 | 2,269 |
| 364B | 0.055 ¹ | 1,656 |
| 364C | 0.466 ¹ | 2,224 |
| 364D | 0.072 ¹ | 3,609 |
| 364E | 0.460 | 2,565 |
| 364F | 0.176 ¹ | 72 |
| 364G | 0.512 | 2,895 |
| 364H | 0.115 | 9,381 |
| MI1 | 0.094 | 443 |
| MI2 | 0.292 | 2,023 |
| MO | 0.280 | 43 ² |

Key Findings

Study Question #3

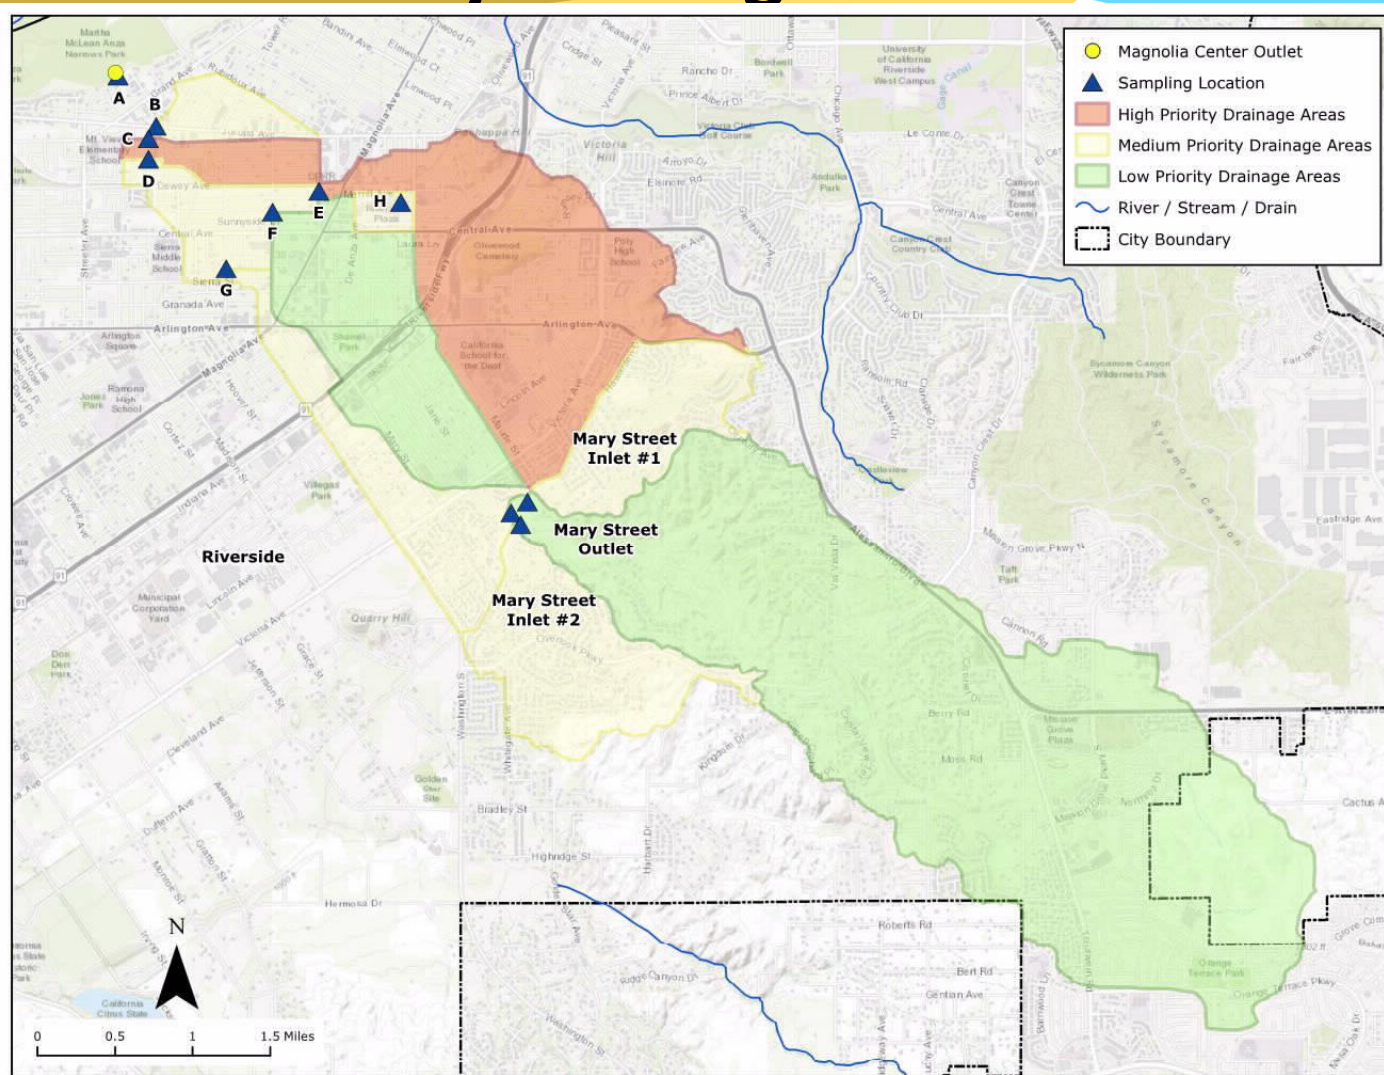

Can we decrease the investigation area to focus on controllable human sources of FIB?

- **Confirmed no surface water connectivity in dry weather between upper drainage area and Magnolia Center Storm Drain, eliminating ~50% of the area.**
- **Sub-drainage of Site 364E – Brockton Avenue near Merrill Avenue and its upstream connections will be further investigated to narrow down potential causes of bacterial indicators and controllable anthropogenic sources.**

RIVERSIDE COUNTY
WATERSHED PROTECTION

Key Findings

Key Findings

| Site | MBAS detected above MRL | Above <i>E. coli</i> Geometric Mean Numeric Targets ¹ | HF183 above 4,100 copies/100 mL |
|------|-------------------------|--|---------------------------------|
| 364A | Yes- 1 sample | Yes | Yes- 3 of 5 samples |
| 364B | Yes- 4 samples | Yes | Yes- 1 of 5 samples |
| 364C | No | Yes | Yes- 3 of 5 samples |
| 364D | No | Yes | No |
| 364E | No | Yes | Yes- 3 of 5 samples |
| 364F | Yes-1 sample | No | No |
| 364G | No | Yes | No |
| 364H | Yes- 2 samples | Yes | No |
| MI1 | Yes- 2 samples | Yes | No |
| MI2 | No | Yes | No |
| MO | Yes- 1 sample | Yes | No |

¹*E. coli* 30-day geometric mean and six-week geometric mean are the same. Comparisons were made to both 113 organisms per 100 mL for MSAR TMDL and 100 CFU/100 mL for Bacteria Provisions WQO. There were no differences in results.

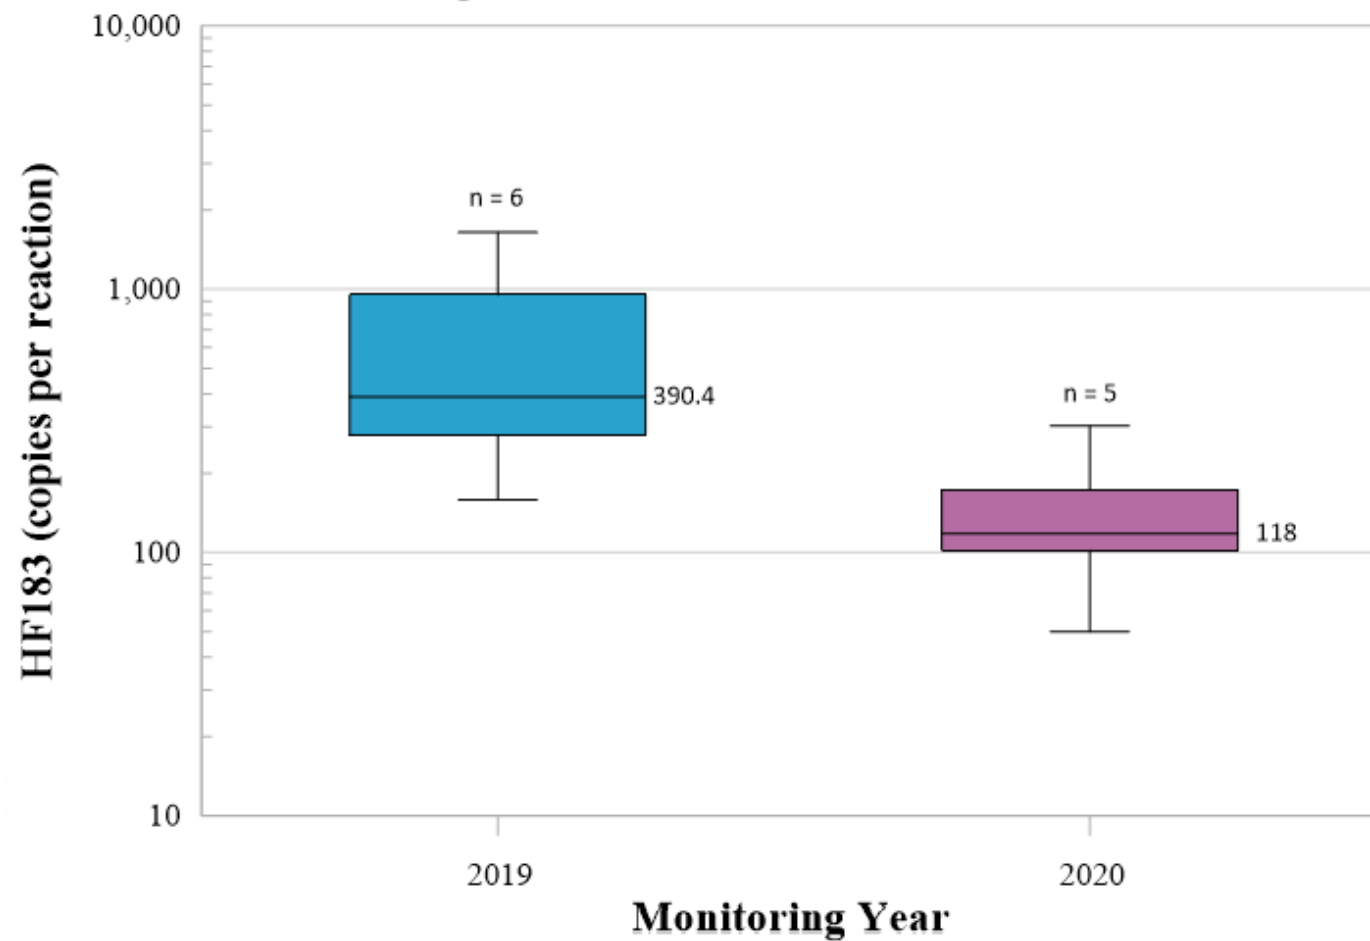

Key Findings

Historical *E. coli* Concentration

Key Findings

HF183 Concentrations at Magnolia Center Storm Drain

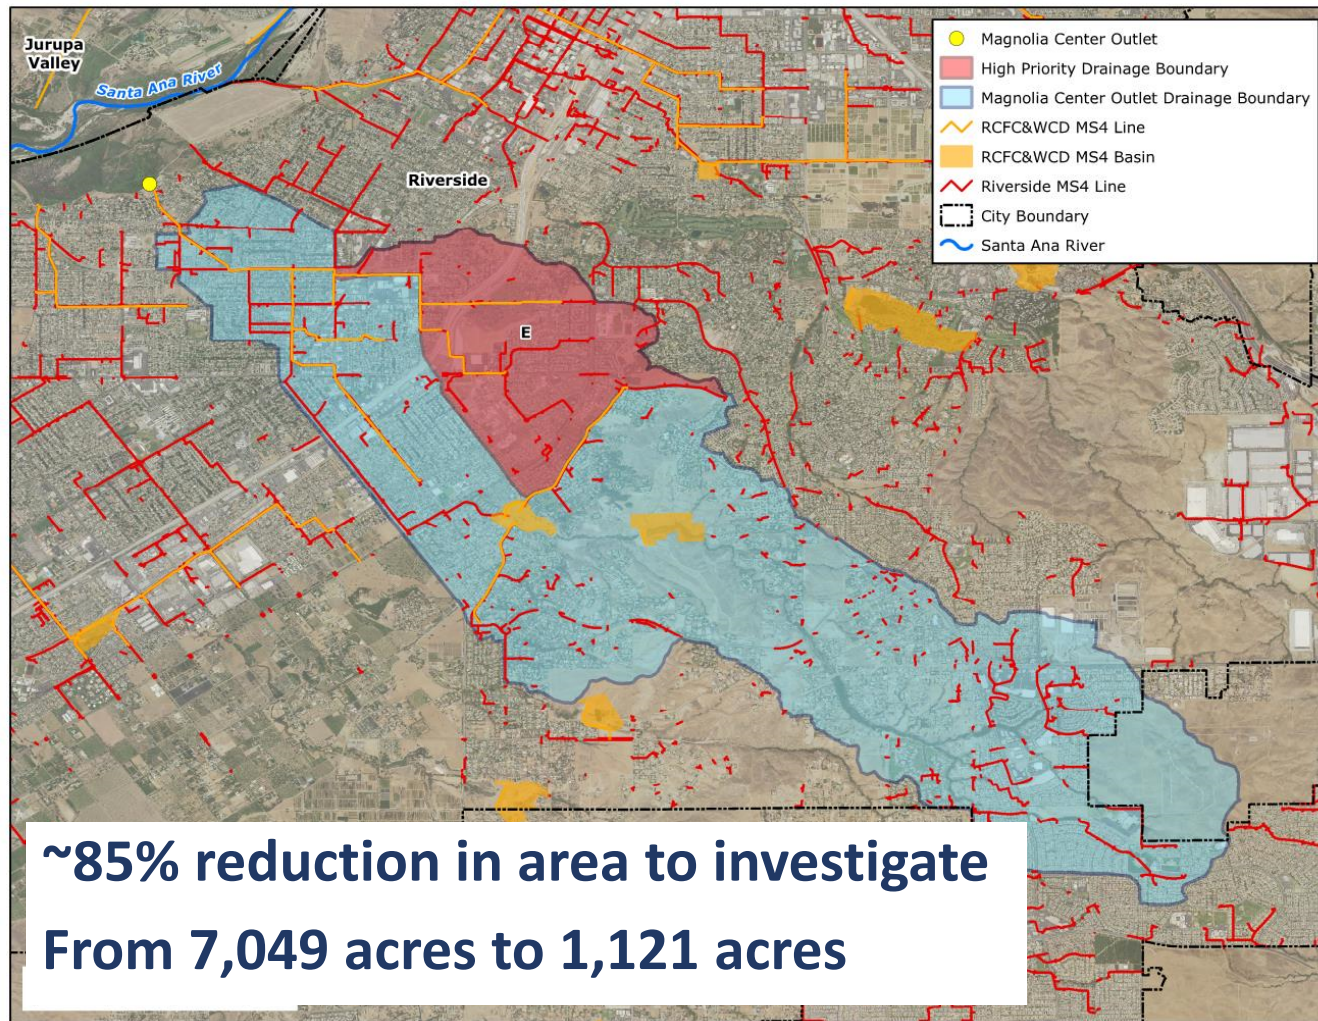

Conclusions & Next Steps

RIVERSIDE COUNTY
WATERSHED PROTECTION

Conclusion

Next Steps

- The City of Riverside will focus investigation efforts on the 1,121-acre drainage area of Site 364E.
- The District will continue to monitor Magnolia Storm Drain Outfall as part of routine compliance.
 - Relevant data will be provided to the City for reference.
