6. WALKS SHALL EXTEND A MINIMUM OF 24" TO THE SIDE OF THE STRIKE EDGE OF A DOOR OR GATE THAT SWINGS TOWARD THE WALK PER CBC SECTION 1133B.7.5.

WATERPROOFING COMMENTS

1. THERE IS A HEIGHTENED CONCERN IN THE CONSTRUCTION INDUSTRY ABOUT THE INTRUSION OF WATER INTO BUILDINGS AND THE RESULTING MOLD THAT DEVELOPS SUBSEQUENTLY. THE OWNER/CLIENT HAS MADE A DILIGENT ATTEMPT TO SPECIFICALLY DETAIL THE PROJECT TO STOP THIS WATER FROM ENTERING THROUGH PENETRATIONS INTO THE BUILDNG. HOWEVER, ALL OF THESE AVENUES WHICH ALLOW THE INTRUSION OF WATER INTO THE BUILDING MAY NOT HAVE BEEN OBSERVED DURING DESIGN. DURING THE COURSE OF YOUR CONSTRUCTION OF THE BUILDNG, THE OWNER/CLIENT'S REPRESENTATIVE ASKS TO BE ADVISED IMMEDIATELY OF ANY QUESTIONABLE CONDITIONS THAT MAY OCCUR WITH RESPECT TO THE PERCEIVED WATER-TIGHTNESS OF THE STRUCTURE. ONCE A BUILDING SUFFERS A BREACH, AND MOLD DEVELOPS, A BUILDING CAN BECOME UNTENABLE, AND CORRECTIONS COSTLY. WE ASK THAT THE CONSTRUCTION TEAM BE DILIGENT IN THEIR CONSTRUCTION EFFORTS TO HELP INSURE THAT, THE BUILDING THAT WE TURN OVER AS A TEAM, WILL BE AS WATERTIGHT AS WE CAN MAKE IT. YOU, THE CONTRACTOR, WILL BE THE LAST HANDS ON THE PROJECT, AND WE ARE CERTAINLY AVAILABLE TO DISCUSS WITH YOU, YOUR CONSTRUCTABILITY IDEAS TO KEEP THIS PROJECT WATERTIGHT.

LEGEND:

AREA NOT A PART OF WORK

OCCUPANCY CALCULATION:

EGRESS WIDTH CALCULATION FOR OFFICE BUILDING

PROJECT INFORMATION:

BUILDING TYPE: OFFICE BUILDING
TOTAL OCCUPANT LOAD: 103 PEOPLE
NUMBER OF EXITS: 4
EXIT WIDTH PROVIDED: 6' WIDTH AT MAIN ENTRANCE, 3' WIDTH AT SECONDARY ENTRANCES

EGRESS WIDTH CALCULATION:

DETERMINE OCCUPANT LOAD PER EXIT:

TOTAL OCCUPANTS: 103
NUMBER OF EXITS: 4
OCCUPANTS PER EXIT:
103 OCCUPANTS
4 EXITS = 25.75 OCCUPANTS (ROUND UP TO 26 OCCUPANTS PER EXIT)

CALCULATE REQUIRED EGRESS WIDTH:
CBC 1005.3.1 REQUIRES 0.15 INCHES PER OCCUPANT FOR NON-STAIRWAY EGRESS COMPONENTS.

REQUIRED WIDTH PER EXIT:
26 OCCUPANTS × 0.15 INCHES/OCCUPANT = 3.75 INCHES

26 OCCUPANTS × 0.15 INCHES/OCCUPANT = 3.75 INCHES
CONVERT TO FEET: 3.75 INCHES ÷ 12 INCHES/FOOT = 0.3125 FEET

COMPARE REQUIRED WIDTH TO PROVIDED WIDTH:

REQUIRED WIDTH PER EXIT: 0.3125 FEET (3.75 INCHES)
PROVIDED WIDTH AT MAIN EXIT: 6 FEET (72 INCHES)

CONCLUSION:
THE REQUIRED EGRESS WIDTH FOR EACH EXIT SERVING 26 OCCUPANTS IS 0.3125 FEET ((3.75 INCHES). THE PROVIDED WIDTH OF 6 FEET (72 INCHES) AT MAIN EXIT EXCEEDS THE REQUIRED WIDTH. THEREFORE, THE EXITS ARE MORE THAN ADEQUATE FOR THE OCCUPANT LOAD, ENSURING COMPLIANCE WITH CBC 1005.

COMPLIANCE STATEMENT:
THE PROVIDED EGRESS WIDTH OF ALL EXITS FOR AN OCCUPANT LOAD OF 103 PEOPLE, DISTRIBUTED ACROSS THREE EXITS, MEETS THE REQUIREMENTS SET FORTH IN THE CALIFORNIA BUILDING CODE (CBC) 1005. CLUBHOUSE FRAMING PLAN

SANTA ANA WATERSHED PROJECT AUTHORITY

S2.0

ENTRANCE IMPROVEMENT PLAN

1 [ ] All grading shall conform to the Riverside Municipal Code, Title 17 and the current City adopted edition of the California Building Code.
2 [ ] All provisions of the preliminary soils report prepared by ___N/A_____, dated ____N/A____ shall be complied with during grading operations. City Business Tax Certif. No. ____N/A____, Exp. Date __N/A____.
3 [ ] This plan is for grading purposes only and is not to be used for the purpose of constructing on-site or off-site improvements. Issuance of a permit based on this plan does not constitute approval of driveway locations or sizes, parking lot structural sections or layout, ADA-related requirements, building locations or foundations, walls, curbing, off-site drainage facilities or other items not related directly to the basic grading operation. On-site improvements shall be constructed from approved building permit plans. Off-site improvements shall be constructed from plans approved for this purpose by the Public Works Department.
4 [ ] Certification from the registered (civil engineer/architect/landscape architect) stating that the grading has been completed per the approved plan, and a compaction report from the soil engineer for fill areas are required prior to building permits being issued.
5 [ ] Contractor is responsible for erosion, dust and temporary drainage control during grading operations.
a. All manufactured slopes in excess of 5 feet in vertical height are to be protected from erosion during rough grading operations and, thereafter, until installation of final groundcover. (See landscape plans for final groundcover).
b. All slope protection swales to be constructed at the same time as banks are graded.
c. The developer and his contractor are responsible for implementation and maintenance of the erosion control measures shown on this plan and SWPPP and also to provide any additional erosion control measures (e.g., hydroseeding, mulching of straw, gravel-bagging, diversion ditches, retention basins, etc.) dictated by field conditions to prevent erosion and/or the introduction of dirt, mud or debris into existing public streets and/or onto adjacent properties during any phase of construction operations. Special attention shall be given to additional erosion control measures noted above during the period October 1 to May 31.
d. After a rainstorm, all silt and debris shall be removed from check berms and check dams. Silt and debris shall be removed from City of Riverside streets. This requirement shall remain in effect until city acceptance of this project.
6 [ ] Any on-site retaining walls shown on this plan that are under 3 feet in height and support a surcharge or that are over 3 feet in height require separate review, approval and a building permit from the Building and Safety Division, Community Development Department. Any necessary retaining walls on the perimeter of this site shall be in place and approved by the building inspector prior to issuance of the grading permit. Approved sequenced grading with 1 1/2:1 maximum slopes to within 2 feet of the adjacent property line may be acceptable to allow for issuance of a grading permit prior to completion of any necessary perimeter retaining walls. (If no retaining walls are shown on the plan, do not put this note on plan.)
7 [ ] Any improvements constructed in the public right-of-way will require a separate construction permit and inspection from the Public Works Department.
8 [ ] Any walls, fences, structures and/or appurtenances adjacent to this project are to be protected in place. If grading operations damage or adversely affect said items in any way, the contractor and/or developer is responsible for working out an acceptable solution to the satisfaction of the affected property owner(s).
9 [ ] The contractor/developer is responsible for ensuring that retaining walls do not interfere with provision of utilities.
10 [ ] It is the grading contractor's responsibility to ensure that adequate compaction has been attained on the entire grading site, including fill areas outside the building pads and on all fill slopes.
11 [ ] It is the soil engineer's responsibility to observe and perform compaction tests during the grading to evaluate the preparation of the natural ground surface to receive the fill and the compaction attained in the fill, including fill areas outside the building pads and on all fill slopes.
12 [ ] Earthwork quantities are shown for grading permit purposes only, and the City of Riverside is not
responsible for their accuracy.
13 [ ] For grading of areas of 1 acre or more, a Storm Water Pollution Prevention Plan (SWPPP) shall be kept on-site and made available upon request of a representative of the Regional Water Quality Control Board (RWQCB) - Santa Ana Region and/or the City of Riverside.
14 [ ] Grading operations shall be limited to between the hours of 7 a.m. and 7 p.m. on weekdays and between 8 a.m. and 5 p.m. on Saturdays. No grading will be permitted on Sunday or federal holidays. (Riverside Municipal Code, 7.35.010, Ordinance No. 6273)
